PROFESSIONAL SUMMARY

Fullstack Cloud Developer graduated in Systems Analysis and Development, with experience compatible with full level in web systems, APIs, marketplace platforms, Data Lake, infrastructure as code and AI applied in production. I work with Node.js, TypeScript, React, Next.js, AWS, GCP, Terraform and Terragrunt, combining product development, cloud architecture, integrations, automations and infrastructure optimization.

Experience in real projects with customers and active users, working with an end-to-end view, support of systems in production, refactoring, cloud cost reduction, online payments, technical SEO, data analysis and automations with AI.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, Express, NestJS, REST APIs, GraphQL, Prisma ORM, TypeORM, PostgreSQL, MySQL, authentication, webhooks, business rules and integrations with external APIs.

Frontend: React.js, Next.js, Vite, Tailwind CSS, ShadCN, Chakra UI, Styled Components, dashboards, administrative interfaces, internationalization, technical SEO and web performance.

Cloud, DevOps, and Infrastructure: AWS, GCP, Lambda, S3, RDS, DynamoDB, CloudFront, IAM, CloudWatch, SQS, SNS, Step Functions, Glue, Athena, Bedrock, Lake Formation, AWS SES, Vertex AI, Cloud Run, BigQuery, Cloud Storage, Dataplex, Terraform, Terragrunt, Docker, GitHub Actions, CI/CD, Railway, Vercel, Cloudflare, and VPS.

Architecture and Quality: Clean Architecture, SOLID, TDD, testing, refactoring, technical debt reduction, code standardization, serverless architecture, event-driven architecture, microservices, ETL pipelines, and systems in production.

Product, Data, AI and SEO: marketplace platforms, affiliates, sellers, online payments, operational reconciliation, loyalty, Data Lake, RAG, Athena SQL generation, applied AI, MCPs, Google Search Console, GA4, Microsoft Clarity, Lighthouse, metadata and indexing.

PROFESSIONAL EXPERIENCE

Fullstack Cloud Developer | HITSS

Jan. 2024 – Current | Home Office

I work on the evolution of Lakeit, an enterprise Data Lake platform in production with active customers, participating in demand analysis, technical prioritization, pipeline support, cloud architecture, infrastructure as code, applied AI, refactoring of legacy flows and alignment with customers and stakeholders.

- I work with an end-to-end view in the flows of data ingestion, processing, consultation, governance and exploration.
- I reorganized AWS resources with Terraform and Terragrunt, migrating parts of the infrastructure previously coupled to SAM/CloudFormation to reusable, standardized and easier to maintain modules.
- Conducted governance, organization, and optimization improvements to the AWS infrastructure, reducing costs from an average of over \$2,300/month to a range between \$800 and \$1,000/month, with estimated annualized savings of over \$15,000.
- I worked on refactoring, fixing legacy bugs, cleaning up obsolete flows and improving the maintainability of APIs, interfaces, pipelines and cloud integrations.
- Evolved event-driven pipelines and flows with S3, SQS, SNS, Step Functions, Glue, Athena, Lambda, IAM, Lake Formation, and CloudWatch.
- I developed APIs, interfaces and cloud integrations with Node.js, TypeScript and Next.js, connecting AWS services, authentication, data and platform business rules.
- I developed AI assistant for data exploration with AWS Bedrock, RAG, conversational memory, SQL Athena generation, schema query in Glue, reports and graphs to support analysis based on real data.

- I participate in alignments with customers and stakeholders, conducting presentations and training on Lakeit for users and teams, focusing on didactics, technical clarity and translation of business needs into technical tasks.

Freelance Developer / Technical Manager | Futbuynow

Feb. 2023 – Current | Remote | On-demand performance

I work on demand in the architecture, evolution and maintenance of a marketplace platform for digital products in the gamer niche, with sellers, affiliates, online payments, order management, real-time operations, technical SEO, data analysis, infrastructure and automations with AI.

- Platform with 11,000+ users, 26,000+ orders created, 20,000+ paid orders, an average of 500 to 800 paid orders/month, and 400 to 500 monthly active buyers.
- I develop a monorepo with Node.js/Express API, React/Vite dashboard and Next.js website, using Prisma, MySQL, Redis, Socket.IO, AWS SES, Cloudflare, Vercel, Railway and AWS RDS.
- Implemented transactional flows with OpenPix, Stripe and PayPal, including webhooks, payment status, business rules, operational reconciliation and automatic order update.
- I developed marketplace, sellers, affiliates and loyalty modules, with dashboards, referral codes, automated commissions and digital product management.
- I applied architectural improvements, standardization, error handling, internationalization, cleaning of obsolete features, rate limiting, Cloudflare rules and security adjustments to mitigate abusive traffic.
- Conducted technical improvements in SEO, metadata, indexing, performance and content structure, tracking results via Google Search Console, GA4, Microsoft Clarity and Lighthouse; the optimizations contributed to the evolution of positions on Google, increased organic visibility and reached 30.4 thousand clicks in 12 months.

COMPLEMENTARY PROJECTS

AWS IaC Blueprint

GitHub: github.com/tiagogcastro/aws-iac-blueprint

- I developed an infrastructure as code blueprint on AWS using Terraform and Terragrunt, with reusable modules, separation by environments and local execution with LocalStack.

i18n Translation npm Library with AI

NPM: [@tiagogcastro/ai-i18n-translate](https://www.npmjs.com/package/@tiagogcastro/ai-i18n-translate) | GitHub: github.com/tiagogcastro/ai-i18n-translate

- I created a TypeScript library published in npm to automate translation of internationalization JSON files using AI, preserving structure, key order, placeholders, multiple languages, reports, and custom providers.

EDUCATION

Systems Analysis and Development – Uncomplicates UniAmérica

Higher Technology Course | Completed in Jul. 2026

CERTIFICATIONS AND COURSES

AWS Technical Essentials - AWS Skill Builder | Jul 2025

JavaScript and TypeScript from Basic to Advanced - Udemy | Feb 2023

LANGUAGES

Portuguese: Native | English: Technical | Spanish: Basic
